

eDynamic Learning Statement on AI

As a publisher, eDynamic Learning sees its role as providing valuable educational resources, fostering critical thinking, and encouraging original thought. Accordingly, our courses feature open-ended assessment opportunities. With various technology options that could assist learners, we are committed to promoting academic integrity.

Our Strategies:

- **Feature varied assessment opportunities:** Resources offer a wide range of assessment styles that prompt learners to articulate their unique perspectives and share their opinions. With these types of varied assessments, it will be difficult for students to use AI.
- **Promote creativity and innovation:** Activities require students to create forms of media that they must generate, such as videos, posters, infographics, and diagrams to demonstrate their ability to think critically and creatively. AI cannot demonstrate unique student creativity and innovation.
- **Demonstrate work and steps to arrive at a product:** Many projects require students to submit their behind-the-scenes work allowing teachers to identify concepts that learners have not been taught but captured from the use of AI tools.
- **Model good academic practices:** Resources explain research best practices, cite sources, and include a bibliography, which provides a positive example.
- **Include clear attribution guidelines:** Every course provides material that teaches explains intentional and unintentional plagiarism, including the use of AI tools, and educate about the importance of crediting ideas and sources appropriately.
- **Provide an Honor Code:** Resources promote academic honesty by providing an Honor Code. Students start each course with a full introduction and explanation of plagiarism.
- **Include teacher resources:** Teacher support can include lesson plans with ideas for implementing assessments in a dynamic, creative way where students are challenged and supported.

A strong commitment to academic standards is necessary to empower ethical behavior among learners. We are dedicated to assisting our school partners to create educational environments that foster creativity, critical thinking, and authentic learning experiences.
